

Description

The SLVU2.8 is designed to protect low voltage, CMOS semiconductors from transients caused by electrostatic discharge (ESD), cable discharge events (CDE), lightning and other induced voltage surges. Low capacitance compensation diode is integrated into the TVS to lower the typical capacitance to 2pF per line. The SLVU2.8 complies with the IEC 61000-4-2 (ESD) standard with $\pm 30\text{kV}$ air and $\pm 30\text{kV}$ contact discharge. The SLVU2.8 is assembled into a 8-pin lead-free SO-8 package. The combination of low leakage, signal integrity and flow through design makes the SLVU2.8 an ideal application such as 10/100 Ethernet.
